Job Makers — *jobmakersforyou.com*

- It has 5 modules. i.e – Admin, Employee, Partner, Household, Jobseeker.
- In admin module, admin can check the all users details, post the job, get the applied candidates for the specific job, search the candidate by location, education, job type and skills.
- Employee and Household module are the same, In this module user can only search the candidate by location, education, job type and skills.
- In jobseeker module, jobseeker only search for jobs and apply for that job.
- For UI i have used react js.
- I have used spring boot for developing the api's.
- I have used PostgreSQL for database to store data.
